PROFILE

Results-oriented Data Scientist with 1–3 years of experience applying statistical analysis, machine learning, and data visualization to business problems. Strong ability to work with large datasets, identify patterns, build predictive models, and communicate findings to technical and non-technical stakeholders.

CORE COMPETENCIES

Programming: Python, SQL

Machine Learning: Supervised Learning, Unsupervised Learning, Ensemble Models, Model Validation

Data Science: EDA, Feature Engineering, Statistical Analysis, Predictive Analytics

Visualization: Power BI, Tableau, Matplotlib, Seaborn

Databases: MySQL, PostgreSQL

Libraries: Pandas, NumPy, Scikit-learn, XGBoost

Development Tools: Git, GitHub, Jupyter Notebook

Cloud: AWS Fundamentals

PROFESSIONAL EXPERIENCE

Junior Data Scientist

ABC Technologies Pvt. Ltd. | 2024–Present

- Analyzed structured business datasets using Python and SQL to uncover trends and performance drivers.
- Designed reusable SQL queries for data extraction, transformation, and reporting.
- Developed predictive models for customer behavior and business forecasting.
- Performed feature selection, data preprocessing, and model validation.
- Created Power BI reports for management-level KPI monitoring.
- Worked with cross-functional teams to define data requirements and analytical objectives.
- Documented analytical processes, assumptions, and model results.

SELECTED PROJECTS

Customer Lifetime Value Prediction

- Prepared customer transaction data using Python and SQL.
- Created behavioral and purchase-frequency features.
- Developed regression models to estimate future customer value.
- Performed error analysis and compared multiple modeling approaches.
- Converted model outputs into actionable customer insights.

Retail Demand Forecasting

- Analyzed historical sales patterns across products and time periods.
- Engineered lag, rolling-average, seasonal, and calendar features.
- Tested multiple forecasting approaches and evaluated them using MAE and RMSE.
- Presented forecast trends through an interactive visualization dashboard.

Marketing Campaign Analysis

- Evaluated customer response and campaign performance using SQL and Python.
- Used statistical analysis to compare customer groups.
- Identified important factors associated with campaign conversion.
- Built a Power BI dashboard showing campaign KPIs and customer trends.

EDUCATION

Bachelor's / Master's Degree in Data Science / Computer Science / Statistics

birla institute of technology | 2020–2024

Relevant Subjects: Machine Learning, Statistics, Database Management, Data Mining, Artificial Intelligence

CERTIFICATIONS

- Professional Certificate in Data Science
- Machine Learning with Python
- SQL for Data Analysis
- Microsoft Power BI / Data Analytics

ADDITIONAL STRENGTHS

- Business Problem Solving
- Statistical Reasoning
- Data Storytelling
- Cross-functional Collaboration
- Technical Documentation
- Presentation & Communication

LANGUAGES

English | Hindi
