

**Viyom\_goyal**

## **DATA SCIENTIST | AI & MACHINE LEARNING ENGINEER**

📍 jaipur, India | 📞 +91-9119037444 | ✉ [viyom\\_goyal.email@gmail.com](mailto:viyom_goyal.email@gmail.com)

LinkedIn: [linkedin.com/in/viyom](https://www.linkedin.com/in/viyom) | GitHub: [github.com/viyom](https://github.com/viyom)

### **CAREER OBJECTIVE**

Data Scientist specializing in machine learning and artificial intelligence, with practical experience in developing predictive models, natural language processing solutions, and end-to-end data pipelines. Strong foundation in Python, SQL, statistics, deep learning, and model deployment. Interested in building scalable AI solutions that solve complex business problems.

### **TECHNOLOGY STACK**

**Languages:** Python, SQL

**ML Frameworks:** Scikit-learn, XGBoost, TensorFlow, PyTorch

**Data Processing:** Pandas, NumPy, Feature Engineering, Data Cleaning

**Deep Learning:** Neural Networks, CNN, Transfer Learning

**NLP:** Text Classification, TF-IDF, Tokenization, Sentiment Analysis

**Visualization:** Matplotlib, Seaborn, Plotly, Power BI

**Databases:** MySQL, PostgreSQL, MongoDB

**Deployment:** Flask, FastAPI, Docker

**Cloud & DevOps:** AWS, Git, GitHub, MLflow

### **PROFESSIONAL EXPERIENCE**

#### **Data Scientist / Machine Learning Engineer**

##### **|2022–Present**

- Developed machine-learning models for classification and prediction problems.
- Designed data preprocessing and feature-engineering workflows using Python.
- Performed model experimentation, hyperparameter tuning, and cross-validation.
- Worked with structured and unstructured datasets for analytical and ML applications.
- Collaborated with software engineers to integrate trained models into applications.
- Used MLflow concepts for experiment tracking and model version management.
- Created technical documentation covering model assumptions, metrics, and limitations.

## FEATURED PROJECTS

### NLP-Based Customer Feedback Classifier

- Processed customer reviews and prepared text data for machine learning.
- Implemented TF-IDF-based text classification models.
- Experimented with different algorithms and compared F1-score and accuracy.
- Performed error analysis to understand common classification mistakes.
- Built a simple API concept for serving model predictions.

### Employee Attrition Prediction

- Analyzed employee demographic, performance, and workplace data.
- Applied feature engineering and classification techniques.
- Compared Logistic Regression, Random Forest, and XGBoost.
- Used cross-validation and evaluation metrics to select an appropriate model.
- Developed visualizations explaining important predictive features.

### Image Classification using Deep Learning

- Built a CNN-based image classification model using TensorFlow/PyTorch.
- Applied image preprocessing and augmentation techniques.
- Evaluated model performance using validation metrics and confusion matrices.
- Experimented with transfer learning to improve model performance.

## EDUCATION

### Master's / Bachelor's Degree in Data Science / Computer Science / Artificial Intelligence

dayalbagh college| 2018–2022

Relevant Coursework: Artificial Intelligence, Machine Learning, Deep Learning, Statistics, Data Mining, Database Systems

## CERTIFICATIONS

- Machine Learning Specialization
- Deep Learning / Neural Networks
- Python for Data Science
- SQL & Database Management

- Cloud Fundamentals — AWS

## **KEY STRENGTHS**

- Machine Learning Model Development
- Deep Learning
- Natural Language Processing
- Statistical Analysis
- Feature Engineering
- Model Evaluation
- Problem Solving
- Technical Communication

## **LANGUAGES**

English | Hindi
